

PROJECT PROFILE

PROJECT VISION

When building their new office, this construction company chose a modern angular design for the building. The use of rough, chiseled face units at varying heights around the building envelope complement the smooth linear lines of the upper portions of the building- which are finished in EIFS.

Chiseled Face CMU

Chiseled Face CMU provide an "old world" chiseled stone appearance, giving buildings unique textural drama.

Consider for use as quoin corners or building knee walls. They also make a great base detail for columns and piers.
