

PROJECT PROFILE

PROJECT VISION

The complete front facade as well as infill panels throughout the exterior envelope of this building featured Gemstone Plus® units. The sheen of these units contrasted nicely with the detail courses of split face half-high units.

Gemstone Plus® meets ASTM C 744 specifications for Prefaced Concrete and Calcium Silicate Masonry Units.

Gemstone Plus® CMU

The unit faces are ground to expose the beauty of the natural aggregates. Next, polymer-modified cementitious grout is used to fill the pores of the unit. Then, the unit faces are highly-polished. Finally, a clear satin gloss, heat-polymerized acrylic is factory-applied.
