Report date: 6 March, 2014

MANUFACTURER:

York Building Products
950 Smile Way
York, PA 17404

TEST PROCEDURE USED:

Units were marked with Diedrich product to be tested. Units were pre-marked by the manufacturer with their product codes. Units were thoroughly pre-wet with fresh water. Dilution rates of the product tested were marked at corresponding section of the brick tested, ie: 1:1, 2:1 6:1 indicating parts per water to parts per product. Cleaning products tested were Diedrich 222 Concrete Brick and Burnished Masonry Cleaner, and Diedrich Green Clean 250.

Units were pre-wet with fresh water. Cleaning solutions were applied by brush. Dwell time on the surface was timed at 5 minutes. Units were thoroughly rinsed with fresh water with a straight stream nozzle by garden hose.

The tested units were allowed to dry at room temperature and to set for a period of 14 days and then examined for any color change or any staining that might occur or develop. Photos were taken of the individual units to document results of unit/cleaner tested and are attached.

TEST RESULTS:

There was no change in appearance of the test units with the use of the tested cleaners. Additionally there was no evidence of etching or damage to the test units.

Attached also find tables indicating unit name and product code, Diedrich cleaners tested with dilution rates, recommended water repellents, and graffiti control/maintenance products.

Tests were conducted by Larry Kotke:

Larry Kotke
