

PROJECT PROFILE

PROJECT VISION

Located adjacent to their museum in a renovated 1800's mill, Turkey Hill's convenience store project required a fast-track product, but needed to closely match the brick on the existing mill structure.

Our Colonial Blend fit the bill perfectly.

Master-Brik™

These structural brick units can be used for load-bearing walls, eliminating the need for CMU back-up walls, saving time and money on your project. Perfect for retail and chain store projects, where client budgets and project timetables are tight.
