

CLEAN-COAT™

CMU for Cleanroom Applications

CLEAN-COAT™ masonry units are manufactured with a special mix design to deliver a tighter face matrix. This provides an ideal unit for use in cleanroom environments (for specialized industrial production or scientific research), where a less porous face texture is required.

Also great for food processing plants, food preparation areas like commercial kitchens, research labs, veterinary facilities, vivariums and hospitals.

Units meet ASTM C 90 specifications, and are available in common masonry shapes and sizes.
