

MASTER-BRIK® structural brick units can be used for load-bearing walls, eliminating the need for CMU back-up walls, saving project time and money. They are mold-resistant, fire-resistant, and provide higher embodied thermal mass — unlike glass and steel construction.

Each unit features a kiln-flashed color treatment to fulfill a clay brick appearance. MASTER-BRIK® units are perfect for retail and chain store projects, where client budgets and project timetables are tight.

#### Product Highlights:

- Energy efficient
- Mold & fire resistant
- Integral color
- Eliminates need for stud or CMU backup wall
- Closely resembles clay brick
- Veneer units available for soldier coursing

Additionally, all units contain integral water repellent for moisture and efflorescence control.

Production capabilities include typical CMU sizes and shapes including:

- 4x4x16 (non-load-bearing), 6x4x16, 8x4x16, 10x4x16 and 12x4x16 in hollow units.
