Shown: Granite

Mesa Retaining Wall Systems combine the economy and versatility of segmental concrete units with proven geogrid technology to create a new generation of structural block walls and a new standard in structural wall systems. The Mesa Systems succeed through a combination of Tensar® structural geogrids, high strength concrete units, and a unique “locking” connector that creates a positive, mechanical, end-bearing connection. This positive connection assures full load transfer from the wall face to the reinforcement, resulting in unsurpassed structural reliability. Your choice of setback: 1/16" (near vertical) or 5/8" (4.5 degrees)

Furthermore, the Mesa Systems are integrated systems. Unlike modular walls, which mix and match components from different sources, every component of a Mesa Wall has been specifically designed and detailed to work together for optimum efficiency and performance. In addition, Mesa Walls do not require core-fill, offering a major cost and installation time advantage. MDOT, VDOT and WVDOT approved.

Tensar HDPE Geogrid

Mesa HDPE Connector

Mesa units are manufactured in accordance with ASTM C 1372.

Mesa Wall in our custom Ash color is approved by the following DOTs:
