CornerStone 100®

FREDERICK, MD PLANT

Each lightweight CornerStone 100® unit has a large hollow core, unique SecureLug™ connection, unit gravel infill and tapered sides.

These features allow maximum flexibility, ease of installation and cost savings while maintaining high structural integrity of both gravity and geosynthetic reinforced walls. Setback = 5/8”/course (4.5 degrees).

When filled with gravel, this unit’s interlock provides high shear resistance, excellent connection strength to geosynthetic reinforcement and maximum layout versatility.

CornerStone 100 units are produced in accordance with ASTM C 1372, and are ICC Evaluation Service Approved.

CornerStone 100®

FREDERICK, MD PLANT

CornerStone 100 units produced at our Frederick, MD facility have a 1/3 mix of double-sided units included in the pallet. (We are currently the only CornerStone 100 manufacturer to have this capability in the USA.) The double-sided unit can be used in wall construction just like a standard CornerStone 100 unit. However, having these units available on the jobsite can also provide the benefit for use as a short parapet wall, or if the retaining wall extends above grade and the back will be exposed.
