Project Profile Series

PROJECT VISION

Located in an older section of suburban Pittsburgh, this parking lot structure was designed with our Master-Brik structural brick units to provide a close match to similar buildings in the area.

Utilizing soldier coursing in the top coursing, provides unique visual appeal.

Master-Brik® CMU

These structural brick units can be used for load-bearing walls, eliminating the need for CMU back-up walls, saving time and money on your project. Perfect for retail and chain store projects, where client budgets and project timetables are tight.
