A STUART COMPANY

Project Profile Series

PROJECT VISION

This unique project features a walking path-level access structure to provide egress to the marina docks.

While slim in appearance, the two-story structure provides a nice, rampart-like presentation facing the Monongahela River.

Master-Brik® CMU

These structural brick units can be used for load-bearing walls, eliminating the need for CMU back-up walls, saving time and money on your project. Perfect for retail and chain store projects, where client budgets and project timetables are tight.
