Each lightweight CornerStone 100® unit has a large hollow core, unique SecureLug™ connection, unit gravel infill and tapered sides.

These features allow maximum flexibility, ease of installation and cost savings while maintaining high structural integrity of both gravity and geosynthetic reinforced walls.

Setback = 5/8”/course (4.5 degrees).

When filled with gravel, this unit’s interlock provides high shear resistance, excellent connection strength to geosynthetic reinforcement and maximum layout versatility.

CornerStone 100 units are produced in accordance with ASTM C 1372.
