For commercial, municipal and residential projects, Regal Stone™ units outperform traditional timber, boulder and cast-in-place walls.

Regal Stone’s pinless system, with its integral rear lip that ensures proper alignment and precise setback, speeds installation, and eliminates guesswork... while reducing labor costs.

You can create non-reinforced gravity walls up to 4’ high and tackle higher walls by using geosynthetic reinforcement.

Setback = 1 1/8” (10.6 degrees)

Regal Stone units are manufactured in accordance with ASTM C 1372.
