The design of Keystone Standard III features a wide, open core which ensures sufficient fill placement, enhances connection strength with geosynthetics and reduces overall product weight, making Standard III easy to handle.

Your choice of setback:
- 1/8” (near vertical)
- 1 1/4” (8 degrees)

Use of high strength fiberglass pins guarantees each Standard III unit is properly aligned and the wall is secure.

The Keystone Standard Unit is the industry’s most stable construction platform for taller, and gravity, walls.

Standard III units are manufactured in accordance with ASTM C 1372.
